- CHAMPCLIM Project Overview

# ECMWF Validation with CHAMP

## The CHAMPCLIM Project

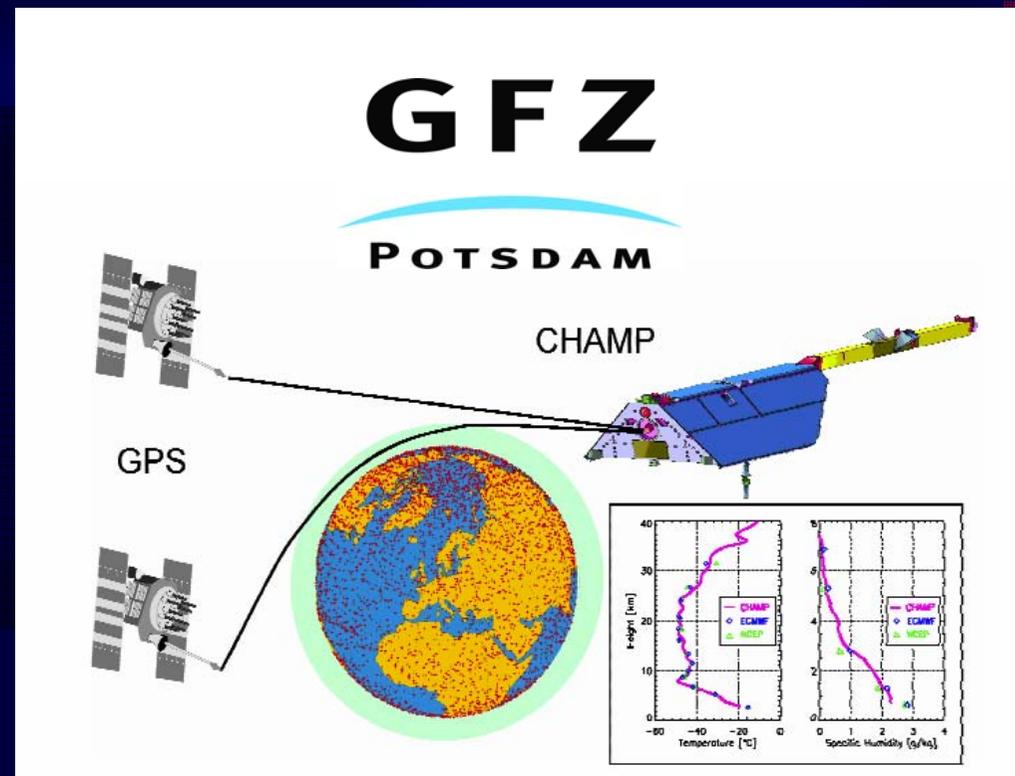

### CHAMPCLIM Project

- Wegener Center / IGAM, University of Graz
- GeoForschungsZentrum (GFZ) Potsdam

### CHAMP Mission

- Operated by GFZ Potsdam
- Low earth orbit (~ 370 km), near polar orbit (87.2°)
- Mission objectives:  
Gravity + magnetic field,  
**atmospheric sounding**  
(radio occultation)

# ECMWF Validation with CHAMP

## CHAMP

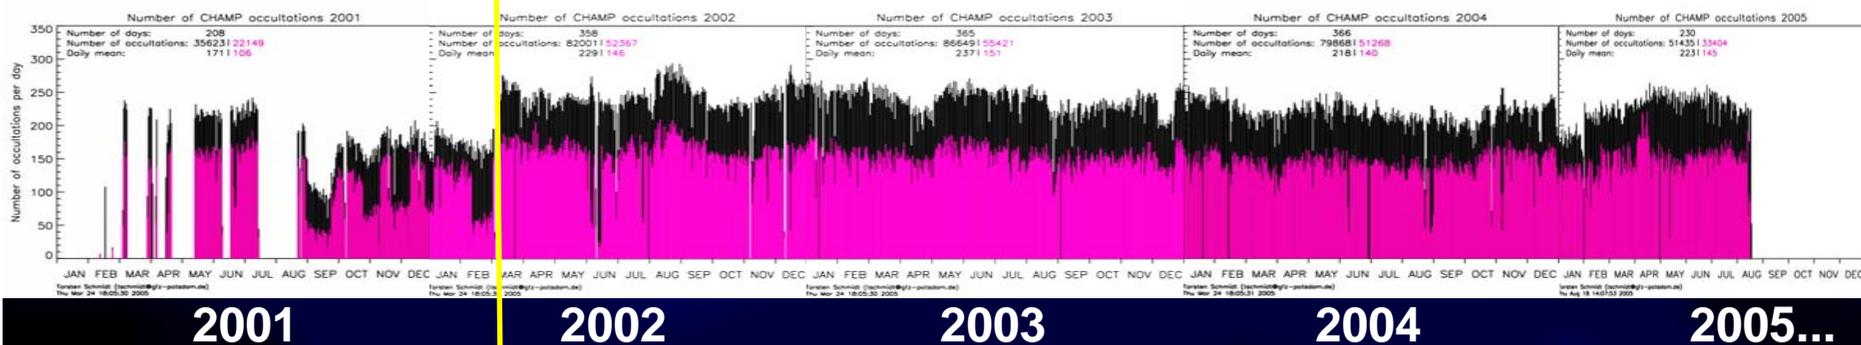

Wegener Center  
www.wegcenter.at

## CHAMP radio occultation experiment

- Continuous since March 2002 (August 2001)
  - ~250 RO events/day → 130 –180 atmospheric profiles/day
  - Expected lifetime: ~ end 2007
- First opportunity (starting point) for RO–based climatologies

# CHAMPCLIM

# ECMWF Validation with CHAMP

## CHAMPCLIM Overview

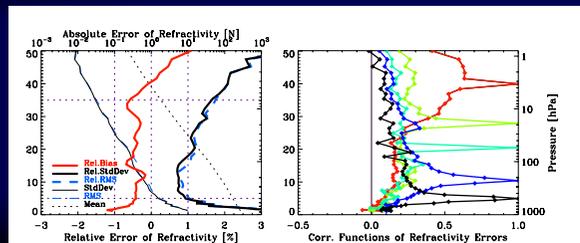

Wegener Center  
www.wegcenter.at

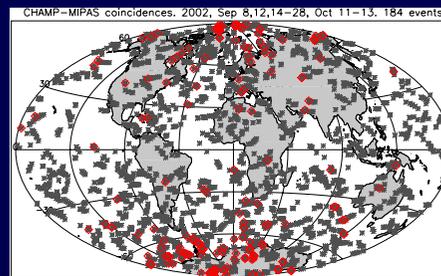

### CHAMPCLIM Major Objective:

“... ensure that the CHAMP/GPS RO data are exploited in the best possible manner, in particular for climate monitoring”

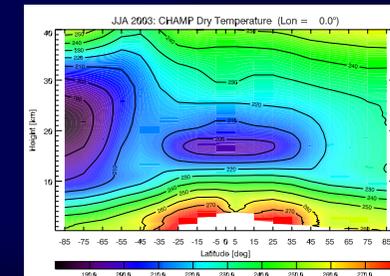

RO Retrieval  
Advancement

Retrieval  
Validation

Climatologies  
& Error  
Specification

CHAMPCLIM Part I (finished)

CHAMPCLIM Part II (started)

# ECMWF Validation with CHAMP

## Retrieval Overview

Wegener Center  
www.wegcenter.at

## CHAMPCLIM Retrieval

- **Excess phases** (provided by GFZ Potsdam)  
Operational GFZ
- **CHAMPCLIM bending angle / refractivity retrieval**  
Advanced stratospheric retrieval (EGOPS/CCR v2, geometric optic).  
Background information:
  - a) ECMWF operational analyses (IGAM/ECMWF) – for direct climatologies
  - b) MSISE–90 based search library (IGAM/MSIS) – for DA use (refractivity)
- **CHAMPCLIM atmospheric parameter retrieval** (temperature, ...)  
Dry air/moist air retrieval (EGOPS/CCR v2)  
Virtually no further background information.

# ECMWF Validation with CHAMP

## CHAMPCLIM Retrieval

Wegener Center  
www.wegcenter.at

EGOPS/CCR v2	IGAM/MSIS	IGAM/ECMWF
<b>Outlier Rejection and Smoothing</b>	“3 $\sigma$ ” outlier rejection on phase delays and smoothing using regularization.	Like IGAM/MSIS
<b>Ionospheric Correction</b>	<b>Linear combination of bending angles.</b> Correction is applied to low-pass filtered bending angles (1 km sliding average), L1 high-pass contribution is added after correction. L2 bending angles < 15 km derived via L1-L2 extrapolation.	Like IGAM/MSIS
<b>Bending Angle Initialization</b>	<b>Statistical optimization of bending angles</b> 30-120 km. Vertically correlated background (corr. length $L = 6$ km) and observation ( $L = 1$ km) errors. Obs. error estimated from obs. profile > 60 km. Background error: 15%. Backg. information: <b>MSISE-90 best fit-profile</b> , bias corrected.	Like IGAM/MSIS, but co-located bending angle profile derived from <b>ECMWF</b> operational analysis as background Information (above ~60 km: MSISE-90). No further pre-processing.
<b>Hydrostatic Integral Initialization</b>	At <b>120 km</b> : pressure = $p(\text{MSISE-90})$ .	Like IGAM/MSIS
<b>Quality Control</b>	Refractivity 5 – 35 km: $\Delta N/N < 10\%$ ; Temperature 8 – 25 km: $\Delta T < 25$ K. Reference: co-located ECMWF profiles.	Like IGAM/MSIS

# ECMWF Validation with CHAMP

## Validation Setup

Wegener Center  
[www.wegcenter.at](http://www.wegcenter.at)

- **ECMWF – CHAMPCLIM Comparison Setup**

# ECMWF Validation with CHAMP

## Validation Setup

## Spatial- Temporal Characteristics CHAMP

- IGAM/ECMWF retrieval
  - Validation period: MAM 2002 – DJF 2004/05 (3 years, ~150,000 temperature profiles)
  - Temporal resolution: seasonal mean (3 month, ~12,500 profiles per season)
  - Horizontal resolution: Zonal means ( $10^\circ$  latitude bands, several hundred to > 1000 events per latitude band)
- Robust statistics

# ECMWF Validation with CHAMP

## Validation Setup

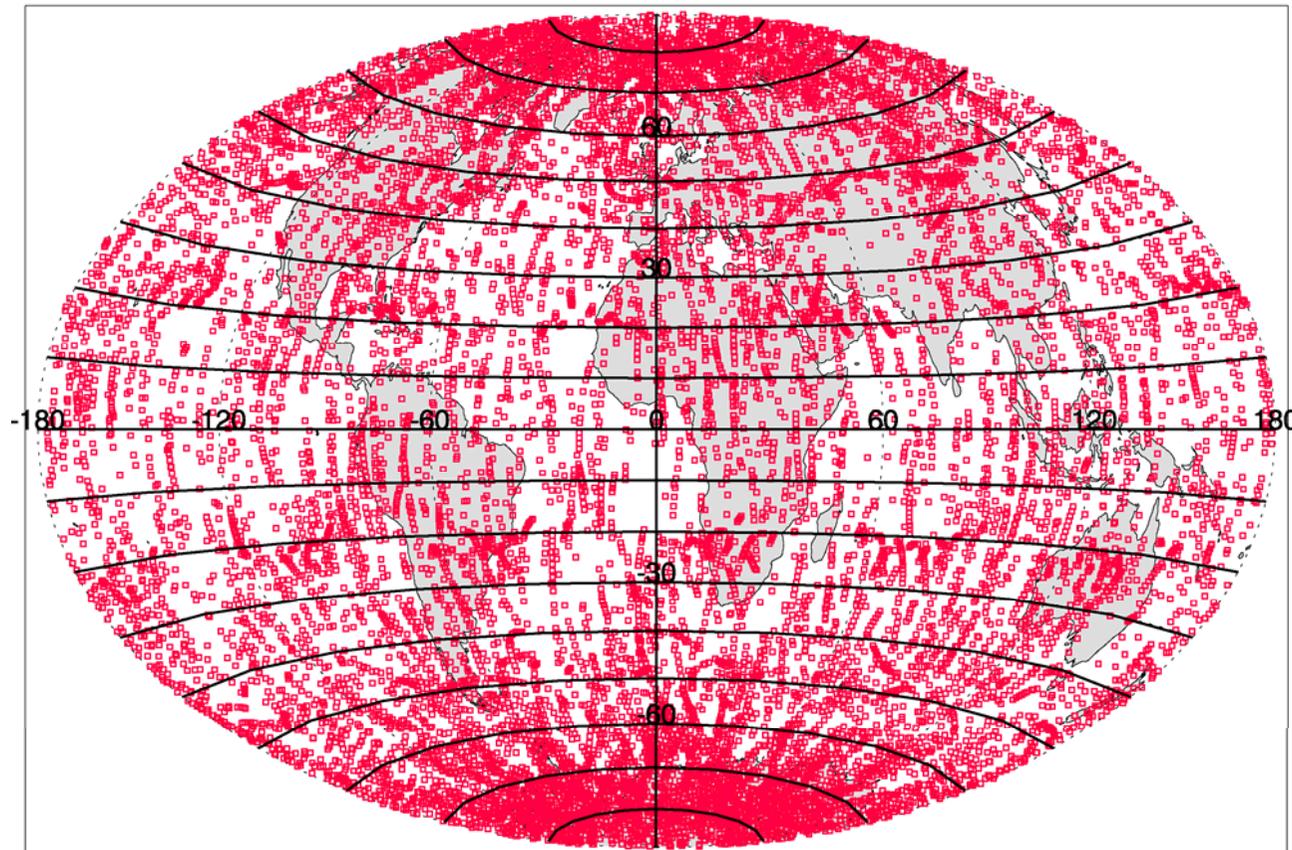

Wegener Center  
www.wegcenter.at

## Spatial- Temporal Characteristics CHAMP

- IGAM/ECMWF reanalysis (validation profiles)
  - Validation period: 1 year (validation profiles)
  - Temporal resolution: 1 day
  - Horizontal resolution: 1000 events per latitude band
- Robust statistics

JJA2003: CHAMP Occultation Event Distribution (Global)

# ECMWF Validation with CHAMP

## Validation Setup

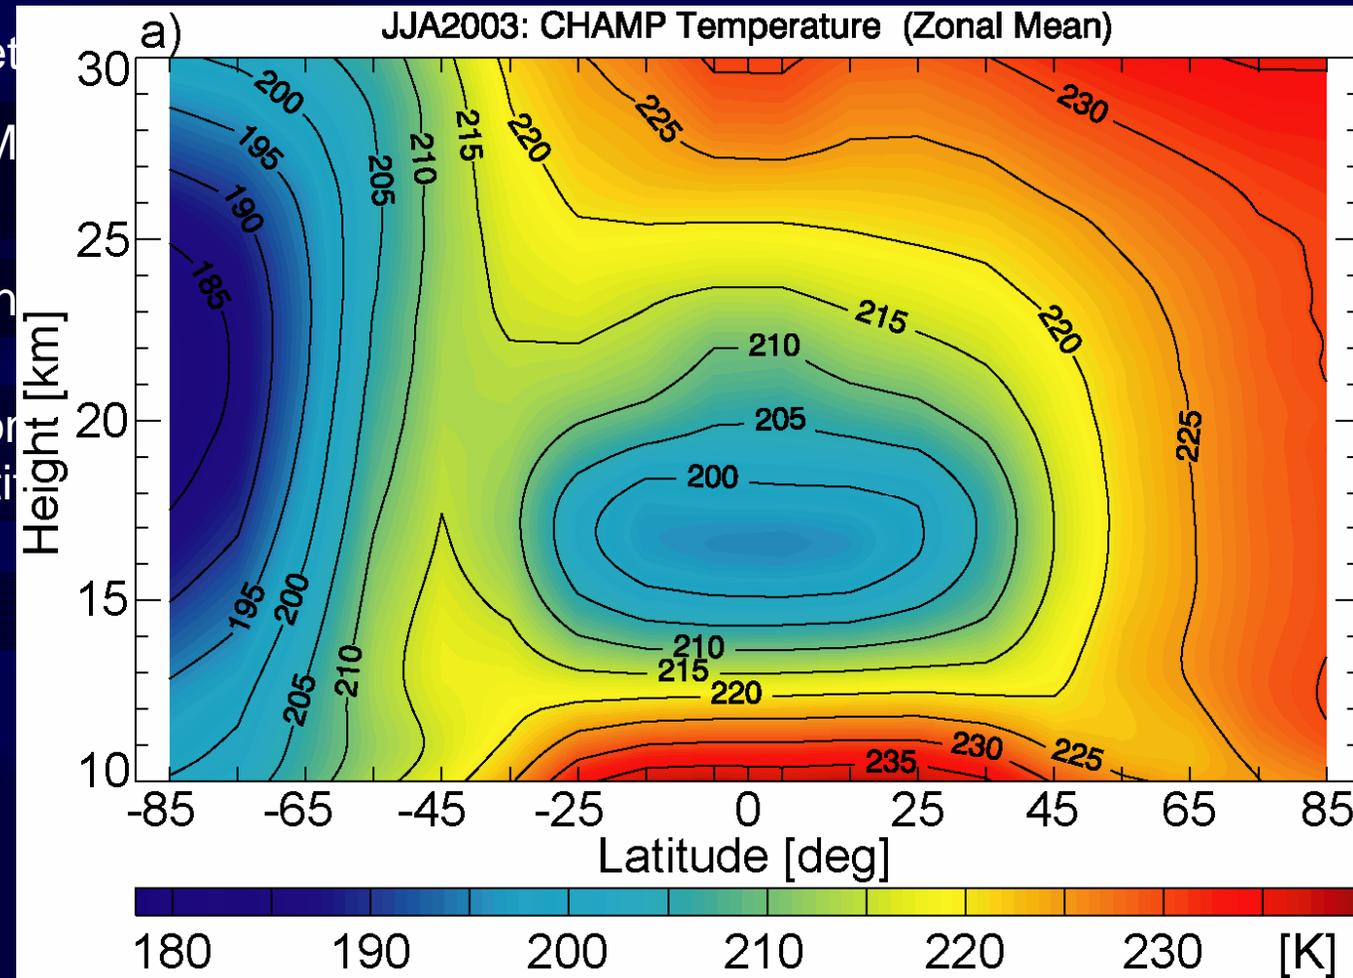

Wegener Center  
www.wegcenter.at

## Spatial- Temporal Characteristics CHAMP

- IGAM/ECMWF reanalysis
- Validation period: May 2002 to May 2003 (zonal mean profiles)
- Temporal resolution: 1000 events per latitude
- Horizontal resolution: 1000 events per latitude

→ Robust statistics

# ECMWF Validation with CHAMP

## Validation Setup

### Characteristics ECMWF operational analyses

- 4DVar data assimilation combining short range forecast with observations
  - Resolution T511L60 (~40 km horizontal, 60 levels up to 0.1 hPa)
  - Provided 4 times per day (00, 06, 12, 18 UT)
  - Used as initial conditions for ECMWF's IFS, for many atmospheric process studies, often as reference dataset in validation studies
- 
- Reduced horizontal resolution (T42L60, ~ 300 km)
  - Profiles extracted at positions of occultation events (to avoid sampling errors)

# ECMWF Validation with CHAMP

## Validation Setup

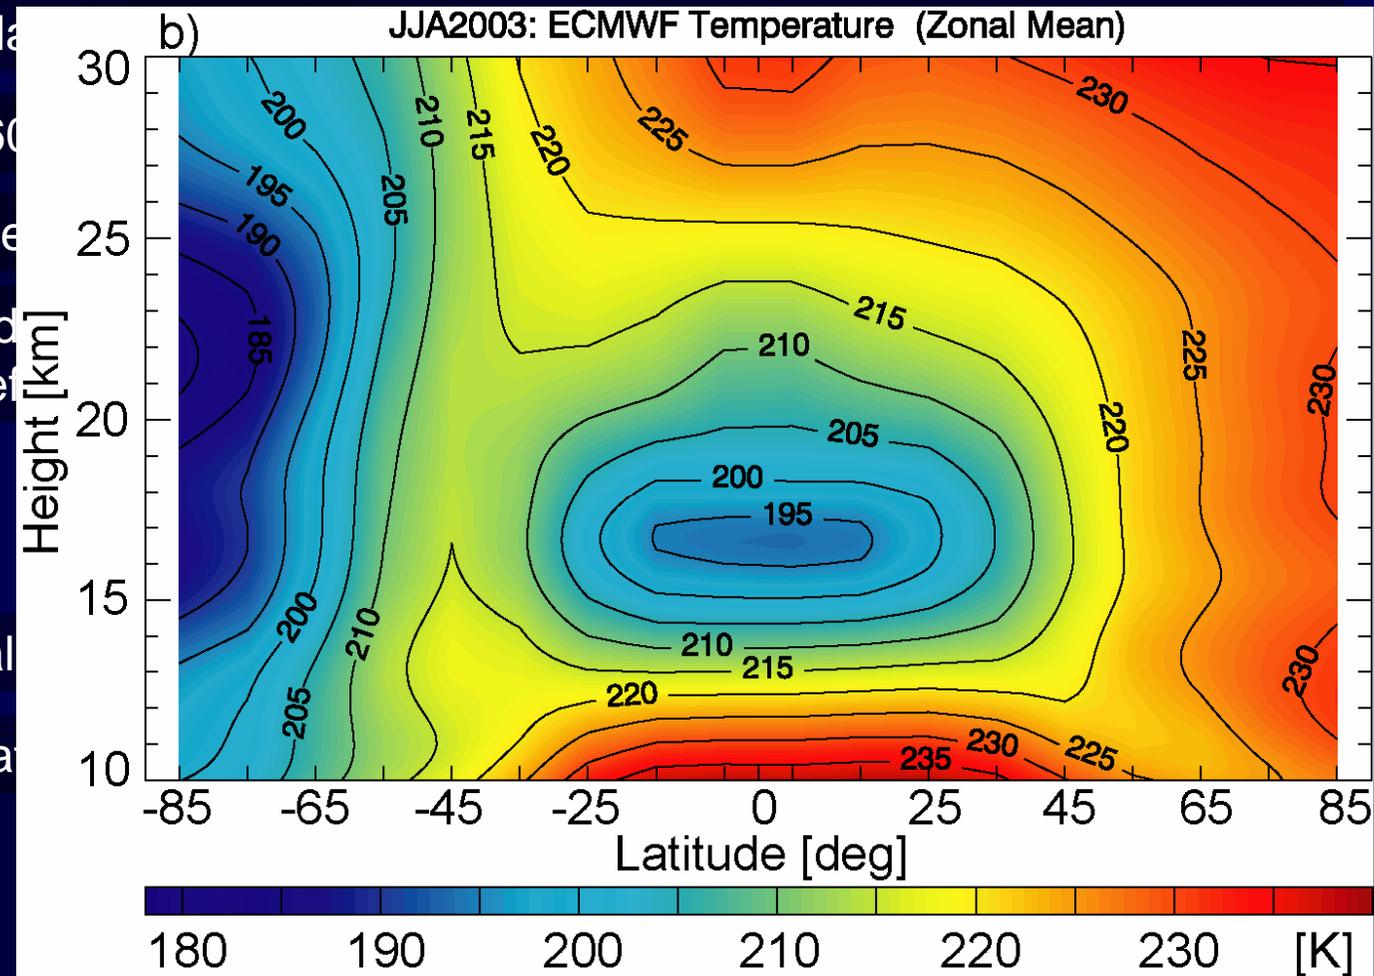

Wegener Center  
www.wegcenter.at

## Characteristics ECMWF operational analyses

- 4DVar data assimilation
- Resolution T511L60
- Provided 4 times per day
- Used as initial conditions for reanalysis studies, often as reference
- Reduced horizontal resolution
- Profiles extracted at 10 km intervals

# ECMWF Validation with CHAMP

## Validation Setup

Wegener Center  
www.wegcenter.at

## Statistics

- Based on temperature difference profiles **ECMWF - CHAMPCLIM**
  - seasonal/zonal mean difference (“bias”)
  - seasonal/zonal std. deviation of differences

## Upper Stratosphere Bias

# ECMWF Validation with CHAMP

## Summary

Wegener Center  
[www.wegcenter.at](http://www.wegcenter.at)

- Summary and Outlook

## Summary

- **Generally good agreement of ECMWF analysis and RO seasonal zonal mean stratospheric temperatures** (bias < 0.5 K) but:
- **ECMWF polar vortex bias** (-2.5 to +3.5 K) (related to DA scheme, AMSU, bias adjustment, ?)
- **Cold low latitude tropopause bias in ECMWF** (1 – 2 K), probably related to weak tropopause height variability in ECMWF (work ongoing)
- **Cold upper stratosphere bias** (-1 to -3 K) (work ongoing)
- **CHAMPCLIM: Accurate seasonal climatologies** (10° zonal mean, 10°x60°) obtainable from a single RO receiver

# ECMWF Validation with CHAMP

## Outlook

- Tropopause study (variability)
- Further CHAMPCLIM retrieval advancement (troposphere, moist air)
- Detailed CHAMPCLIM error characterization (sampling error, local time sampling, ...)
- Detailed CHAMPCLIM vertical resolution characterization
- Include more (future) RO data (SAC-C, GRACE, Metop/GRAS, COSMIC, ...)
- Open (web-based) access to CHAMPCLIM products
